

Metalbud NOWICKI MH-SAS injectors

The latest Metalbud NOWICKI MH-SAS injector line series represents the highest quality of meat injection and curing. All parameters of injection - injection head stroke, moment of start / stop injection, number of strokes per minute or conveyer speed – make the injector SAS the perfect unit for any injection challenge - Injection of red meat products, bone-in and bone-less products and poultry.

Wide range of machine production scale starting from 75 needles up to 660 needles gives opportunity to final customer to choose the proper machines for his needs.

Construction advantages

- Injection process controlled by servo drives and PLC
- Auto diagnostic mode via Internet. Extremely effective for quick troubleshooting of machines
- Small deviation of injection level
- High production rates in lbs/h
- High flexibility of injection processes
- Integration into injection lines
- Efficient filtration with multiple-stage filtration
- Control panel in multiple languages
